## What is it?

The **Consumer API** is how you can access user data using the same API that powers Banno's own Banno Online and Banno Mobile experiences.

The Consumer API helps you embed financial capabilities into **app experiences outside of Banno** (or use when building custom Banno dashboard cards with the Plugin Framework).

## Checkpoint

Have you [signed up for a developer account?](#)

## Consumer API OpenID Connect Example

This project is an example of how to connect to [Banno](#) services using [OpenID Connect](#) (an identity layer on top of [OAuth 2.0](#)).

This repository includes an example that uses [Node.js](#) with the [Passport](#) authentication middleware to handle the OpenID Connect protocol.

This example is best used when following along with the [Authentication Quickstart on JackHenry.Dev](#).

### Note:

If you're learning how to build a *plugin*, you should use this other example project - <https://github.com/Banno/simple-plugin-example>
